Xin Luo

Bellevue, WA 425-623-9223 luoxin0414@gmail.com linkedin.com/in/xin-luo-lx0414

Product-focused graduate student with experience in AI, IoT, and human-centered design. Strong in connecting user needs with technical execution through cross-functional projects and rapid prototyping. Brings a hands-on approach to product development, with curiosity, ownership, and a strong willingness to learn and explore new technologies.

Education

University of Washington **Sep. 2025 – Mar. 2027**
Master of Science in Technology Innovation | IoT, HCI, UX, Machine learning *Bellevue, WA*

Nanchang University **Sep. 2020 – Jun. 2025**
Bachelor of Architecture in Architecture *Nanchang, Jiangxi, China*

Experience

WIIISH Studio **Jul. 2024 – Dec. 2024**
Product and UX Intern *Shanghai, China*

- Analyzed website traffic data using Python (pandas) to identify high drop-off pages; cross-referenced with social media engagement trends to propose UI and content structure improvements, increasing average dwell time by 22.5%.
- Prototyped an IoT-enabled safety device integrating wearable hardware with a mobile app for real-time alerts; validated through end-to-end hardware-software testing with solo female travelers as target users.
- Conducted user research to uncover safety pain points for solo female travelers; synthesized findings into a user journey map across 10+ touchpoints to define core product requirements.

Eastco Lighting Design (Shanghai) Co., Ltd. **Jan. 2024 – Mar. 2024**
Designer Intern *Shanghai, China*

- Collaborated with hardware engineers to design and test smart lighting control systems; translated client requirements across multiple spatial scenarios into actionable interaction and lighting schemes.
- Conducted lighting simulations using DIALux and SketchUp to model and compare visual effects of dynamic lighting schemes across real-world environments, informing final product design decisions.

Jiangxi Provincial Commercial Architectural Design Institute Co., Ltd. **Jun. 2023 – Sep. 2023**
Designer Intern *Shanghai, China*

- Automated parametric design workflows using Grasshopper (Python scripts) and BIM to improve design efficiency.
- Performed data-driven crowd flow analysis to inform urban planning decisions and improve spatial usability.
- Collaborated with cross-functional teams to translate technical requirements into feasible design solutions.

Projects

SafeCompanion — IoT Travel Safety Product | *IoT, Figma, Python, Arduino* **Dec. 2024**

- Conducted user research including interviews and surveys to identify safety pain points faced by solo female travelers, synthesizing insights across physical, psychological, and financial risk scenarios to define core product requirements.
- Prioritized key features (emergency alerts, real-time location sharing, safe route recommendations) and iterated on product form factor, designing the device as discreet wearable accessories to improve real-world adoption.
- Validated product through end-to-end prototype testing, identifying and resolving critical usability issues in emergency triggering and device pairing to inform product iteration.

SpeakUp — AI Speech Feedback System | *Python, Machine Learning, Signal Processing* **Dec. 2025**

- Identified the lack of objective, real-time feedback as a key barrier to speaking improvement, defining core product requirements around emotion recognition and actionable guidance.
- Validated an end-to-end speech analysis pipeline achieving 86.2% accuracy, translating model outputs into user-facing feedback to support real-time speaking improvement.

ACADIA 2024 · University of Calgary | *Multimodal Models, Data Visualization* **Jun. 2024**

- Identified high professional barriers and supply chain fragmentation in interior design, defining a framework connecting users, designers, and furniture suppliers through natural language interaction.
- Validated through real-world scenario testing, demonstrating rapid design preview generation aligned with user requirements and streamlined design-to-procurement workflows.

Technical Skills

Product: Product Strategy, Roadmapping, User Research, Market Analysis, PRD, Agile, Sprint Planning
Data & Analytics: Data Analysis, Product Metrics, Making, Experiment Design, A/B Testing, Machine Learning Fundamentals, User Feedback Analysis
Technical & Prototyping: Python, SQL, Prototyping (Hardware & Software), Embedded Systems Prototyping, VS Code, Figma, Fusion 360
